

MACHINE LEARNING

Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.

1. Which of the following is an application of clustering?
 - a. Biological network analysis
 - b. Market trend prediction
 - c. Topic modeling
 - d. All of the above

Correct option: d

2. On which data type, we cannot perform cluster analysis?
 - a. Time series data
 - b. Text data
 - c. Multimedia data
 - d. None

Correct option: d

3. Netflix's movie recommendation system uses-
 - a. Supervised learning
 - b. Unsupervised learning
 - c. Reinforcement learning and Unsupervised learning
 - d. All of the above

Correct option: c

4. The final output of Hierarchical clustering is-
 - a. The number of cluster centroids
 - b. The tree representing how close the data points are to each other
 - c. A map defining the similar data points into individual groups
 - d. All of the above

Correct option: b

5. Which of the step is not required for K-means clustering?
 - a. A distance metric
 - b. Initial number of clusters
 - c. Initial guess as to cluster centroids
 - d. None

Correct option: d

6. Which of the following is wrong?
 - a. k-means clustering is a vector quantization method
 - b. k-means clustering tries to group n observations into k clusters
 - c. k-nearest neighbour is same as k-means
 - d. None

Correct option: c

MACHINE LEARNING

7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?

- i. Single-link
- ii. Complete-link
- iii. Average-link

Options:

- a. 1 and 2
- b. 1 and 3
- c. 2 and 3
- d. 1, 2 and 3

Correct option: d

8. Which of the following are true?

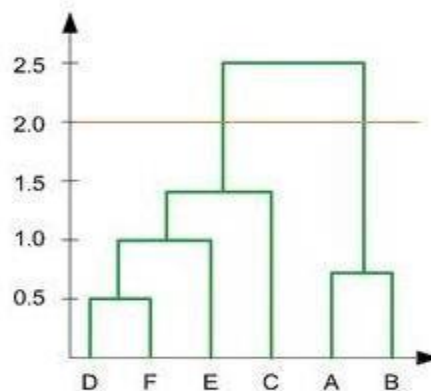

- i. Clustering analysis is negatively affected by multicollinearity of features
- ii. Clustering analysis is negatively affected by heteroscedasticity

Options:

- a. 1 only
- b. 2 only
- c. 1 and 2
- d. None of them

Correct option: a

9. In the figure above, if you draw a horizontal line on y-axis for $y=2$. What will be the number of clusters formed?

- a. 2
- b. 4
- c. 3
- d. 5

Correct option: a

MACHINE LEARNING

10. For which of the following tasks might clustering be a suitable approach?
- Given sales data from a large number of products in a supermarket, estimate future sales for each of these products.
 - Given a database of information about your users, automatically group them into different market segments.
 - Predicting whether stock price of a company will increase tomorrow.
 - Given historical weather records, predict if tomorrow's weather will be sunny or rainy.

Correct option: b

11. Given, six points with the following attributes:

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156
p4	0.2652	0.1875
p5	0.0789	0.4139
p6	0.4548	0.3022

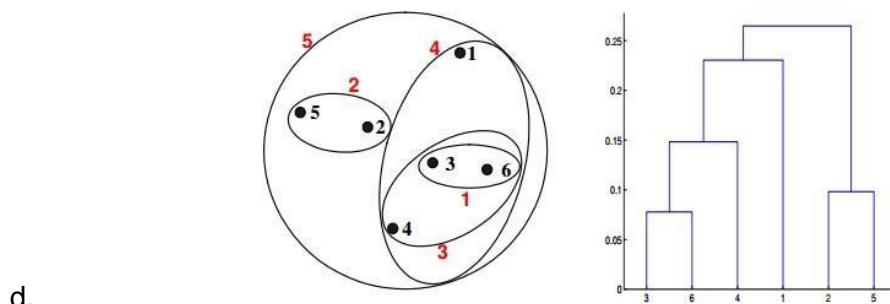

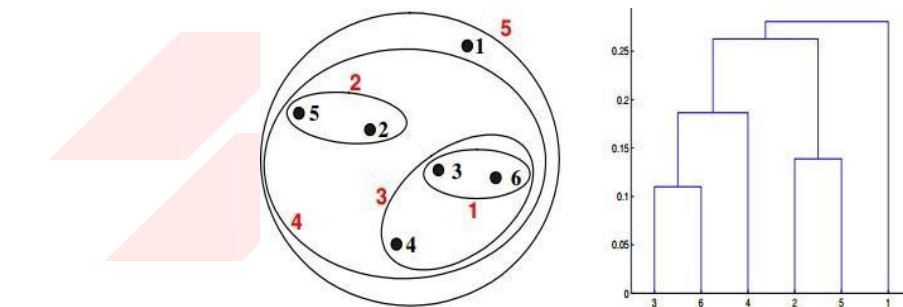

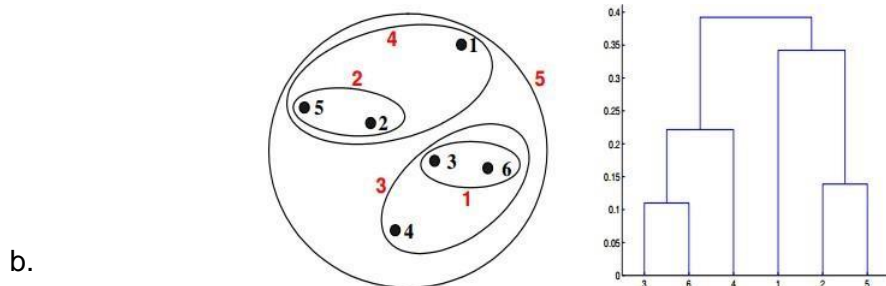

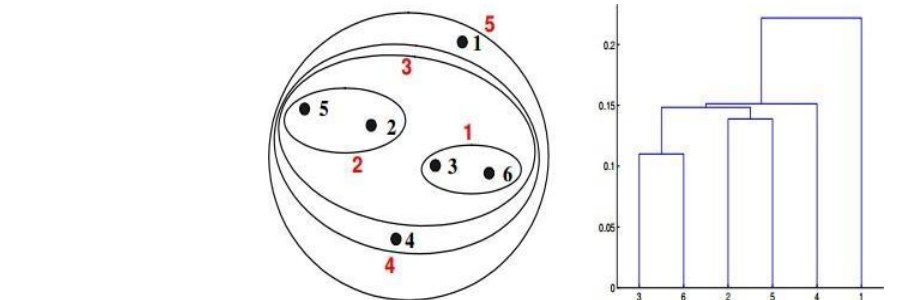

Table : X-Y coordinates of six points.

	p1	p2	p3	p4	p5	p6
p1	0.0000	0.2357	0.2218	0.3688	0.3421	0.2347
p2	0.2357	0.0000	0.1483	0.2042	0.1388	0.2540
p3	0.2218	0.1483	0.0000	0.1513	0.2843	0.1100
p4	0.3688	0.2042	0.1513	0.0000	0.2932	0.2216
p5	0.3421	0.1388	0.2843	0.2932	0.0000	0.3921
p6	0.2347	0.2540	0.1100	0.2216	0.3921	0.0000

Table : Distance Matrix for Six Points

MACHINE LEARNING

Which of the following clustering representations and dendrogram depicts the use of MIN or Single link proximity function in hierarchical clustering:

Correct option: a

MACHINE LEARNING

12. Given, six points with the following attributes:

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156
p4	0.2652	0.1875
p5	0.0789	0.4139
p6	0.4548	0.3022

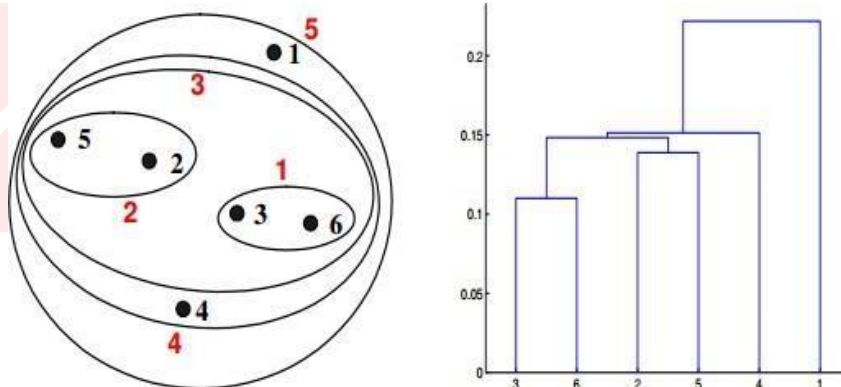

Table : X-Y coordinates of six points.

	p1	p2	p3	p4	p5	p6
p1	0.0000	0.2357	0.2218	0.3688	0.3421	0.2347
p2	0.2357	0.0000	0.1483	0.2042	0.1388	0.2540
p3	0.2218	0.1483	0.0000	0.1513	0.2843	0.1100
p4	0.3688	0.2042	0.1513	0.0000	0.2932	0.2216
p5	0.3421	0.1388	0.2843	0.2932	0.0000	0.3921
p6	0.2347	0.2540	0.1100	0.2216	0.3921	0.0000

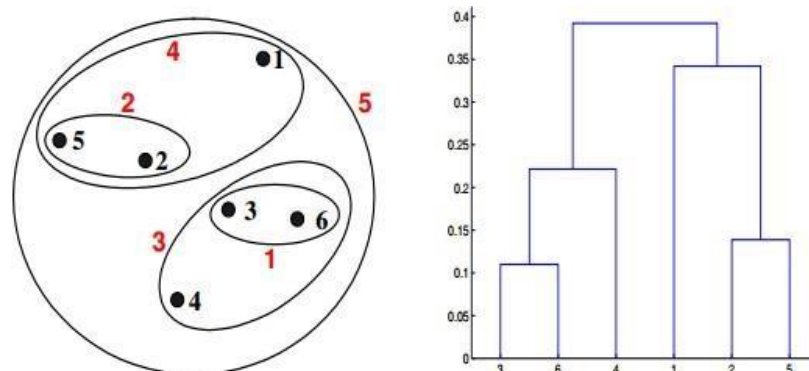

Table : Distance Matrix for Six Points

Which of the following clustering representations and dendrogram depicts the use of MAX or Complete link proximity function in hierarchical clustering.

a.

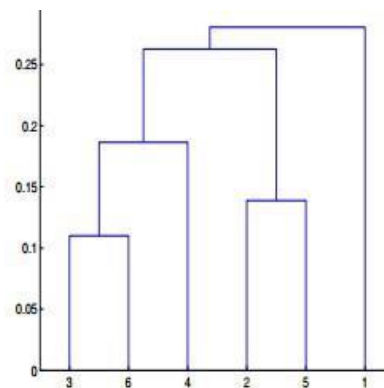

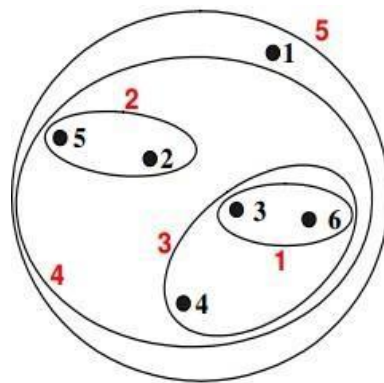

b.

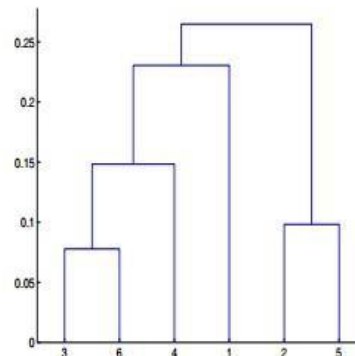

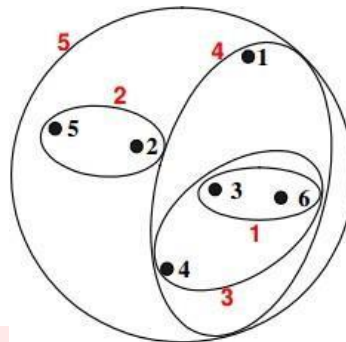

MACHINE LEARNING

c.

d.

Correct option: b

FLIP ROBO

Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly

13. What is the importance of clustering?

Clustering is important for data analysis as its task is of grouping objects so that objects in same group are similar to each other as compared to those other groups.

14. How can I improve my clustering performance?

We can improve clustering performance by using PCA and modified K means
